

## Why doesn't my heater

Check the following:

Is your pump on?

Is your heater turned on at the heater?

Is your thermostat turned up at heater and remote unit?

Do you have your temperature calibrated on your remote unit, phone, in- house remote?

Does your filter need to be backwashed or chemically cleaned?

Is your water level too low or too high?

Is your pump impeller clogged? (clean out with garden hose)

Is your skimmer or filter baskets full of debris?

If none of the above, ask for a service tech to come out and look at your heater.
